

2014 Preferred Drug List (2-Tier)

**Please bring this guide
with you to your next
doctor visit.**

Do you have questions?

Call Assurant Health Customer Service at the phone number printed on your ID card.

Dear Member,

To help you know how drugs are covered by your plan, we are pleased to provide you with a copy of our **2014 Preferred Drug List**.

This document provides helpful information on the Assurant Preferred Drug List and your pharmacy benefit plan. You may want to take this guide with you when you see your doctor to talk about what is covered under your plan.

Many commonly prescribed drugs are listed in this guide. Please remember this is not a complete list of drugs covered under your plan. Because thousands of drugs are included in your pharmacy benefits plan, we only list the most commonly prescribed ones.

Please note that not all drugs listed in this guide are covered by all pharmacy benefit programs. Check your benefit materials for the specific covered drugs and your co-payment program.

What is the Assurant Preferred Drug List?

Our Preferred Drug List is meant to give you a general view of drugs covered by your plan. Changes to the list are based on the latest medical findings as well as information from the Food and Drug Administration (FDA) and drug makers.

This list includes both brand-name and generic drugs and is updated regularly. Assurant will generally cover the drugs listed on our Preferred Drug List as long as they are medically necessary and plan rules are followed. Coverage is not limited to drugs on the Preferred Drug List.

The Preferred Drug List is subject to change. Drugs on the list are based on reliable medical data, safety and cost. When you talk to your doctor about what drug may be right for you, it is important to remember that you and your doctor are responsible for making the final decision on your drug therapy.

Why is the Preferred Drug List subject to change?

During the year, we may add or remove drugs from the Preferred Drug List. These changes happen for various reasons and may move a drug from one coverage tier to another.

- As brand-name drugs lose their patents, generic versions may become available. When this happens, the generic drug may be added to the list and available at a lower copayment or coinsurance tier.
- The FDA approves many new drugs throughout the year. Your plan generally covers new FDA-approved drugs; however, the new drug(s) also may be subject to precertification or step-therapy requirements.
- Some drugs may also no longer require a prescription. If your drug becomes available over-the-counter (OTC), the drug will generally no longer be covered under your prescription plan.
- If the FDA removes a drug from the market it will also no longer be covered under your prescription plan.

Why do some drugs have quantity limits?

Your plan may limit the amount of a drug you can receive at one time. These limits help your doctor and pharmacist check that the drugs are used appropriately while promoting patient safety. We use medical guidelines, FDA approval and guidance from drug makers to set these coverage limits. The quantity limits program includes:

- **Dose Efficiency Edits** – Limits coverage of prescriptions to one dose per day for drugs that are approved for once-daily dosing.
- **Maximum Daily Dose** – A message is sent to the pharmacy if a prescription is higher than the maximum allowed dose.
- **Quantity Limits Over Time** – Limits coverage of prescriptions to a specific number of units in a defined amount of time.

To get coverage for amounts over the allowed quantity, you, your doctor or the person you appoint to manage your care can request a coverage override by calling the phone number located on your ID Card. The quantity limit list is subject to change.

What is step-therapy?

With step-therapy you must try one or more alternate drugs before your plan will cover a step-therapy drug. These drugs are FDA-approved, treat the same condition(s) and, they may also be available to you at a lower copay or coinsurance tier.

If it is necessary for you to use a drug on the step therapy list, you, your doctor, or the person you appoint to manage your care can request a coverage override by calling the phone number located on your ID card.

What is the Prior Authorization program?

The Prior Authorization program encourages appropriate and cost-effective use of drugs by allowing coverage only when certain conditions are met.

- A physician, a patient, or a person appointed to manage the patient's care must request prior authorization before drugs on the Prior Authorization List will be covered under a member's pharmacy benefits plan. If the request is approved, the drug will then be covered at the applicable costs associated with the member's plan.
- The Prior Authorization program is based upon current medical findings, FDA-approved manufacturer labeling information, and cost.
- To determine if a drug requires prior authorization, refer to the column titled Prior Authorization next to the list of drugs in this guide. You can also call the phone number on the back of the member identification card to obtain more information on the prior authorization review process.
- The list of drugs requiring prior authorization is subject to change.

What are generic drugs?

Drug manufacturers develop and release new drugs under a brand name. When the patent expires, other manufacturers are then able to make duplicate versions of the same drug. Generic drugs are chemically the same as their branded counterparts. They are also the same in dosage, safety, strength, form and intended use. Plus, generics usually cost less than brand-name drugs.

Generic drugs are only available after the FDA approves them. When filling your prescription, your pharmacist generally can substitute a generic drug for a brand-name drug when the generic is rated by the FDA as equivalent and also where it is permitted by your doctor and state law.

THERAPEUTIC CLASS LIST KEY (on following pages)
<i>lower case</i> - Generic medication
UPPERCASE – Brand-name medication

Table of Contents – Preferred Drugs by Therapeutic Class

Therapeutic Class	Page
Antineoplastic Agents	6
Blood Products – Modifiers – Volume Expanders	8
Cardiovascular System	9
Central Nervous System	18
Dermatological Agents	30
Endocrine System	35
Gastrointestinal System	44
Genitourinary System	48
Infections and Infestations	50
Musculoskeletal System	55
Ophthalmic Agents	58
Otic Agents	61
Respiratory Tract Agents	61
Miscellaneous	64
